Professional Summary

Software engineer with 5+ years of back-end development in C#, .NET, SQL Server and X++, currently 3+ years at Deloitte delivering multi-million-euro Microsoft Dynamics 365 Finance and Operations implementations for multinational clients in pharmaceuticals, retail, food & beverage, manufacturing, and publishing. Designing and evaluating LLM tooling for AI coding agents on self-hosted models, aimed at better memory management and cost efficiency. Microsoft certified (MB-500). EU citizen; no visa sponsorship required.

Work Experience

Software Engineer *October 2023 – Present*
Deloitte Remote, Greece

- Owned end-to-end delivery across 7 multinational, multi-year Microsoft Dynamics 365 F&O implementations (up to 3 concurrent), from requirements analysis and estimation through development, testing support, and 5 go-lives.
- Extended existing business logic in sales, warehousing, pricing, tax, and finance with X++ Chain of Command, keeping the standard flow intact while adapting it to business requirements through parametrisation.
- Designed table structures and business flows for a tree-structured item attribute hierarchy, using a bottom-up depth-first traversal to classify items by type during quotation-to-agreement conversion.
- Implemented role-based access control and record-level data security (XDS policies).
- Built an in-house payment QR and barcode module that compresses payloads (LZMA) to each bank's specification and exports ISO-compliant files over SFTP, replacing paid third-party subscriptions in 3 countries.
- Optimised queries and calculations by ~35% on average through targeted caching, cutting the slowest document generation from 30 minutes to under 1 minute.
- Designed data migration and integration pipelines (DMF data entities, Excel add-in import/export) that moved legacy data into redesigned schemas and created related records automatically.
- Automated business processes and document generation, from one-click return-order posting and warehouse barcode scanning to 30+ data-driven reports and scheduled batch payment reminders.
- Released through Azure DevOps CI/CD and LCS, covering production deployments in the technical lead's absence.
- Worked in Agile teams of up to 6 developers and 10 functional consultants (sole developer on one implementation), onboarding 4 new engineers and mentoring 3 through code reviews and pairing.

Software Engineer *July 2021 – August 2023*
INTERMEDIA Heraklion, Greece

- *Software company serving Greek municipalities and private-sector clients: public-facing platforms for up to 500 users, new service products, and R&D on system interoperability, migration, and automation.*
- Led the end-to-end design and implementation of an in-house security monitoring system in C# (.NET 6), LiteDB, and PowerShell that scored IP reputation through threat-intelligence services and blocked low-reputation addresses.
- Redesigned and migrated legacy databases to SQL Server from MS Access and REST API sources, using EF Core code-first models, reverse engineering, and data transformation.
- Refactored and optimised the codebase for performance and maintainability, reducing its size by 30%.
- Automated publishing workflows, including scheduled imports from Diavgeia, the Greek government transparency platform, HTML page generation, and TablePress table updates on WordPress.
- Automated testing with Selenium and Pester, reaching 80% code coverage.

Software Developer (Military Service) *December 2022 – March 2023*
Hellenic Army Xanthi, Greece

- *Mandatory service; INTERMEDIA work continued remotely in off-duty hours.*
- Selected to build a confidential data management application in MS Access/VBA with custom role-based access control mapped to military clearance levels.

Certifications

Dynamics 365: Finance and Operations Apps Developer Associate (MB-500) | Microsoft Certified *October 2026*
Fundamentals of Accelerated Data Science with RAPIDS | NVIDIA *July 2022*
Fundamentals of Deep Learning | NVIDIA *June 2022*

Personal Projects

Self-directed work on AI engineering and agent tooling, designed and directed by me and implemented with AI coding agents on a shared, multi-user Linux development server.

- **Agent memory platform**: a memory layer that lets AI coding agents carry decisions, conventions, and lessons learned from one session to the next, exposed as tools over MCP, with consistency linting, backup, and restore. In daily use by multiple agents across devices.
- **LLM evaluation**: benchmarks and controlled A/B studies that measure what makes coding agents on self-hosted open-weight models faster, more accurate, and more reliable, including a benchmark of real bug fixes the model cannot have seen in training.
- **Long-session memory for coding agents**: a search tool that lets an agent recover exact values lost when its context is compacted, keeping 99% of them against 12% without it, with total input tokens within 6% of the plain agent.
- **X++ development tooling**: tooling for my own X++ workflow that checks code against documented platform APIs and real schema definitions, and catches common defects before review.
- **Infrastructure for unattended LLM runs**: a resumable job runner, run tracing, and automated output checks, so long model runs on a shared server stay traceable and verified.
- **Rule-driven AI development (in progress)**: global, technology-neutral design rules, from architecture and methodology to database and framework choices down to code, enforced by deterministic checks so that AI agents build within one consistent system design, with higher output credibility and tighter control.

Education

University of Crete *September 2016 – September 2022*
Bachelor of Science in Computer Science, Grade: 7.41/10 (Very Good) Heraklion, Greece

- Thesis on information retrieval for Greek: Elasticsearch, Solr, and Algolia evaluation with a keyboard-aware typo-correction algorithm.

Skills

Programming: C#, SQL, PowerShell, Java, VBA, X++
Frameworks & Platforms: .NET, EF Core, Microsoft Dynamics 365 F&O, SSRS, Docentric, DMF, XDS
Databases: MS SQL Server, MS Access, SQLite, LiteDB, Elasticsearch
AI & LLM: LLM evaluation, statistical A/B testing, LLM-as-judge, MCP, context management for AI agents
Tools & Practices: Visual Studio, Azure DevOps (CI/CD), LCS, Git, Jira, REST APIs, Selenium, Linux, Agile/Scrum
Languages: Greek (native), English (advanced)
