Professional Summary

Microsoft-certified (MB-500) Dynamics 365 Finance and Operations developer with 5 years of back-end experience in C#, .NET, and SQL Server, the last 3 specialising in D365 F&O (X++) at Deloitte, delivering multi-million-euro ERP implementations for multinational clients in pharmaceuticals, retail, food & beverage, manufacturing, and publishing. EU citizen; no visa sponsorship required.

Work Experience

Software Engineer, Dynamics 365 F&O *October 2023 – Present*
Deloitte Remote, Greece

- Owned end-to-end work items across 7 multinational, multi-year D365 F&O implementations (up to 3 concurrent), from requirements analysis and effort estimation through development and delivery.
- Extended sales, warehousing, pricing, tax, workflow, and finance modules (AP/AR, ledger journals, bank statement imports) using X++ Chain of Command extensions; built security roles, privileges, and XDS policies.
- Contributed development, bug fixes, and tester support through 5 go-lives across 4 implementations, including one solution that rolled out live in 2 countries separately.
- Replaced third-party payment subscriptions in 3 countries for a pan-European medical diagnostics group with in-house QR/barcode generation, encoding payloads to each bank's specifications (LZMA/7z) with automated ISO-compliant SFTP exports, eliminating the recurring subscription fees.
- Optimised X++ queries and calculations by ~35% on average through targeted caching; in the largest case, cached quotation totals cut a 270-line sales-agreement print from 30 minutes to under 1 minute.
- Delivered 30+ Docentric and SSRS reports (10+ new, 20+ core-logic extensions), including QR-referenced payment reports and batch-run payment reminders.
- Built DMF data entities and Excel add-in imports/exports that migrated legacy data into redesigned table structures and automatically created the related child records during import.
- Automated recurring processes such as one-click packing-slip posting for return orders, reducing minutes of manual steps to seconds, and introduced warehouse barcode scanning to eliminate manual data entry.
- Handled CI/CD production releases through LCS and Azure DevOps, acting as release cover in the technical lead's absence.
- Worked in Agile technical teams of 2-6 developers alongside up to 10 functional consultants; onboarded 4 new engineers and mentored 2 through their first projects via code reviews and pairing.

Software Engineer *July 2021 – August 2023*
INTERMEDIA Heraklion, Greece

- *Software company serving Greek municipalities and private-sector clients: public-facing platforms for up to 500 users, applied NLP research, new service products, and R&D on system interoperability, migration, technologies, and automation.*
- Led the end-to-end design and implementation of a security monitoring system that scored IP reputation via integrated threat-intelligence services, built with C# (.NET 6), LiteDB, and PowerShell.
- Redesigned and migrated legacy databases using EF Core code-first models, reverse engineering, and data transformation to SQL Server from MS Access and REST API sources; resolved cascade-action migration issues with custom trigger logic.
- Refactored and optimised the codebase for performance and maintainability, reducing its size by 30%.
- Automated publishing workflows, including HTML generation for Diavgeia, the Greek government transparency platform, and WordPress data uploads via TablePress, cutting publishing time.
- Performed testing and code-coverage analysis with Selenium and Pester.

Software Developer (Military Service) *December 2022 – March 2023*
Hellenic Army Xanthi, Greece

- *Mandatory service; INTERMEDIA work continued remotely in off-duty hours.*
- Selected to build a confidential data management application in MS Access/VBA, implementing custom role-based access control (RBAC) with an authentication module that mapped each user to hierarchical permissions across military clearance levels.
- Designed a dynamic interface that adapted menus, forms, and visible data to the signed-in user's profile, so restricted records never appeared for unauthorised users.

Certifications

Dynamics 365: Finance and Operations Apps Developer Associate (MB-500) | Microsoft Certified *October 2026*
Fundamentals of Accelerated Data Science with RAPIDS | NVIDIA *July 2022*
Fundamentals of Deep Learning | NVIDIA *June 2022*

Personal Projects

Self-directed work on AI infrastructure and agent tooling, built and run on a shared, multi-user Linux development server.

- **AI-assisted D365 development**: tooling that integrates LLMs into the daily X++ workflow, combining automated linting, curated X++ pattern knowledge bases, and verification logic that keeps generated code to documented platform APIs.
- **Agent memory platform**: persistent, searchable memory for AI coding agents, built on SQLite full-text search and exposed to the agents as tools (MCP), with typed records, explicit update and retention policies, and automated consistency linting. In daily use by multiple agents across devices.
- **LLM evaluation and optimisation harness**: A/B evaluation of agent context-management strategies on self-hosted open-weight models, using paired statistical comparison with LLM-judge scoring, latency and accuracy profiling, and unattended overnight runs exceeding 15,000 model calls, including a measured 2x latency reduction on routine coding tasks.
- **Infrastructure and developer tooling**: process supervision with automatic crash recovery, scheduled snapshot and backup tooling, a headless screenshot/preview service, and a static-site build pipeline verified by a Playwright QA suite of 400+ checks.

Education

University of Crete *September 2016 – September 2022*
Bachelor of Science in Computer Science, Grade: 7.41/10 (Very Good) Heraklion, Greece

- Thesis on IR Systems: Elasticsearch, Solr, and Algolia indexing with typo-tolerant correction algorithm.

Skills

Programming: X++, C#, SQL, Python, PowerShell, Java, VBA

Frameworks & Platforms: Microsoft Dynamics 365 F&O, .NET, EF Core, SSRS, Docentric, DMF, XDS

Databases: MS SQL Server, MS Access, SQLite, LiteDB, Elasticsearch

Tools & Practices: Visual Studio, Azure DevOps (CI/CD), LCS, Git, Jira, REST APIs, Selenium, Playwright, Linux, Agile/Scrum

Languages: Greek (native), English (fluent)
